

BOS Preventive Maintenance Can Increase Your Profits!

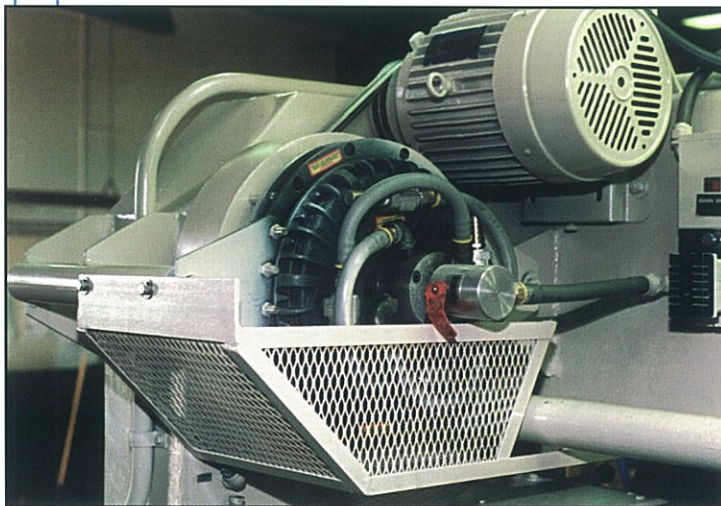

Preventive maintenance is a concept being embraced by an ever growing number of manufacturers around the world. Plain and simple... preventive maintenance saves!

BOS can design a preventive maintenance program to meet your unique needs. It begins with our in-depth inspection of your machines by our trained technicians at your facility. Our comprehensive, written reports include the following areas:

- All pneumatic, hydraulic and lubrication systems.
- All electrical controls.
- All mechanical components including bearings, ways and drive train.
- Guarding and other safety equipment.

This Danly Press is completely rebuilt and ready for shipment.

A new Wichita clutch installed on a Press Brake.

Repairs performed by BOS Machine could include...

- New clutch/brake units.
- New bronze bearings.
- New monitored lubrication systems.
- New light curtains, brake monitors and other OSHA required controls.
- Rework other mechanical components as needed.
